

Global Eco Power can arrange for Renewable Energy Awareness Workshops at Schools, Colleges and even at Institutional levels. We also provide advice in policy formulation with regards to Environmental safety and the possible options with "an innovative and out of the box " approach.

With the focus of the country and even the world on making the world a greener, safer place and the ambitious missions that we in India, have embarked upon it is imperative that correct, relevant information and education be made available to the decision makers and the next generation of world citizens.

It is with this in mind that we at Global Eco Power are providing this service to help, so if you want our assistance please feel free to contact us.
